Feedback Solutions Partners with Yorkland Controls to deliver Advanced People Occupancy Monitoring Technology for Energy Savings and more.

TORONTO ONTARIO, August 4, 2020 – Feedback Solutions’ patented technology delivers highly accurate real time occupant data using advanced people counting technology and an intelligent software platform. This valuable data allows smart building operators to optimize facility utilization and to adjust building HVAC systems based on actual occupant counts as the most effective approach to demand control ventilation available. Data is transmitted via BACnet/IP, direct to a BAS, DDC controller or via cloud platform.

“I am excited about the partnership. The solution is building automation ready and has applications from energy efficiency, indoor air quality, physical access, space utilization analysis and other smart building system integrations.”. says Yorkland’s Gerry Cellucci, Vice President of Systems Solutions.

“After completing our first successful data and energy efficiency project together we look forward to working with Gerry and his team in the Canadian market. Yorkland understands our value proposition as a stand alone application or as a complement to a wider energy efficiency retrofit.”, say Karen Smith, CMO of Feedback Solutions Inc.

About Feedback Solutions Inc.:

Feedback Solutions has benefitted multiple facility operators with significant reductions in: energy consumption, operating costs, GHG emissions and needless wear and tear on HVAC equipment. Our highly actionable data has also provided them with deep insights as to how their facilities are used over the course of the day, week or month allowing them to make informed operational decisions. Our clients include Commercial Landlords, Municipalities and top Universities in Canada and the US.
